

Splitting ends

If we want to avoid this hair conditioners, and strengthening preparations. Undercutting them every month or half a centimeter. Splitting ends can be the result of overheating hair dryer and subjecting them to chemical treatments. The cause can also be negligent care. Therefore:

- * Use moisturizing shampoos and conditioners with protein such as milk, silk, to prevent the drying hair;
- * We put on the lower part of long hair (usually dry, with broken scales) regenerative mask 2-3 times a month.

Improve the condition of damaged ends of the preparations so as to avoid damage to the hulls and surround every hair thin membrane. However much you split ends cut off, even 2-3 centimeters.
